Order Sheet for Plants and Bulbs

We always recommend having plants sent by express, at purchaser's expense, when there is an express office near, as we can usually send somewhat larger plants, and do not have to wash the soil off the roots (as in the case when sent by mail). We always try to add enough extra plants of our own selection to help pay the charges. Kindly write your list of plants all together on this page (not mixed up with the seeds) so as to prevent any mistake upon the part of our clerks in copying the order. We do not ship plants to Canada, Mexico and Foreign Countries. Be sure to read paragraph marked "Plant Shipments" on Page 1 of Catalog.

About Reliable Seeds
Crops be grown. Yet a great many contingencies may arise to prevent the best seeds from giving satisfaction, and for all these reasons we cannot, of course, guarantee or be responsible for a crop, as success is dependent upon natural causes, which are beyond human control. Therefore, we do not warrant in any way, express or implied, the contents, or the description, quality, productiveness, or any other matter of any seeds, bulbs, or plants sold by us, and we will not be in any way responsible for the crop. If the purchaser does not accept these goods on above terms, no sale is made thereof, and he must return them at once, and money will be refunded. Subject to above conditions we make this sale, at the moderate prices at which we sell our goods.

We will appreciate receiving your order early this year.

Buckbee's World's Fair Lawn Grass.

Buckbee's Famous "Full of Life" Lawn Grass Seed

Produces a perfect and enduring lawn of luxuriant richness, with closely interwoven, firm, deep and elastic turf, is generally ready for mowing in six weeks from time of sowing and is composed of a thoroughly balanced combination of native and foreign fine-leaved, deep-rooting grasses of interweaving habit, that flourish under varied conditions, soils and climates, growing during different seasons of the year, so that a deep green, smooth and velvety sward free from clumps is maintained from snow to snow without burning brown in the hot months of summer. A lawn may be established either by "sodding" or "seeding." The latter is not only much less expensive but much more satisfactory, as better grasses can thus be obtained, and the quality and variety of the grasses have a great deal to do with appearance and the permaneucy of the lawn.

Buckbee's Shady Place Lawn Grass Seed

Buckbee's Shady Place Lawn Grass Seed THE VERY BEST OBTAINABLE—CAREFULLY BLENDED—YOU CAN HAVE A BEAUTIFUL LAWN WITH VERY LITTLE WORK, BY USING OUR WELL BALANCED MIXTURE

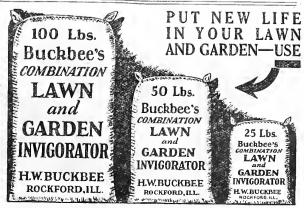

Ou nearly all lawus there are unsightly bare spots under the shade of trees, which have baffled all efforts to get into grass, but with this mixture there need be no further difficulty. It is a combination of fine dwarf-growing, evergreen varieties which in their wild or natural state are to be found growing in the woods or other sheltered and shaded spots. Ground that has been densely shaded by trees is frequently "sour" and if the drainage is defective it is apt to be covered with moss and coarse bog grasses. In such cases an application of slake lime, at the rate of one bushel to each thousand square feet, or 40 bushels to the acre, is an excellent corrective and sweetener, but the moss should be first removed.

or under what conditions it was used, the results were always the same—simply marvelous.

A Petunia Bed, with our combination Invigerator sprinkled lightly on the soil, showed an increase in size of the flower, and nore brilliant colorings. Vegetables planted in poor soil in July when others were well started towards bearing, not only made heavier yields, but matured almost as soon as the earlier planted garden. Lawns with an application of 25 pounds to 1000 square feet grew heavier sod of a richer color, and were still as green on December 1st as in the Summer time. Keep a bag on hand always. For table use sow the smaller kinds early in rows 16 to 18 inches apart. For field culture sow in drills 18 to 24 inches apart, using from 1½ to 3 pounds of seed to the acre. Cover ½ to 1 inch deep and see to it that the soil is pressed firmly above the seed. As soon as the plants appear, use the cultivator or wheel hoe. Thin 2 to 6 inches apart in the row, according to the size of the variety.

With high culture this variety will give splendid satisfaction as a large-growing sort for Fall and Winter use. For market use it is preferred to any other because it is slow to wilt and its rich yellow color is very attractive. The stalks are unusually heavy. This is the strain used by gardeners and extensive growers in every large Celery district in the United States. No other strain of seed gives such universal satisfaction and it is without question the most popular and dependable early strain of Celery grown. The plants are medium sized, stalky, and the stalks crisp, solid, heavy and of a yellowish-green color when young, but as they mature the inner stems and leaves turn a beautiful golden yellow, which adds much to their attractiveness and makes the work of blanching much easier. A most valuable Celery of recent introduction. An entirely new and distinct variety, and the only easily blanched green or long-keeping sort known. Its remarkable combination of easy blanching and long-keeping qualities—not found in any other variety—make it at once the most valuable of all Celeries for those who grow for market as well as for all private gardeners, both for an early crop and for Winter use. The plants are of strong and stocky growth with green foliage, showing a slight tinge of yellow in the inner leaves. The stalks are very large, heavy, thick and solid with shallow ribs and with extra large and firm hearts. Easy Blanching is of most attractive appearance, largely on account of its large, finely colored heart, and the quality is superb, tender and brittle, with an excellent nutlike aromatic flavor. Pkt.

Ears large (the fat kind), grains of great depth, exceedingly tender and sweet, the sort that fairly melts in the mouth. Something in Sweet Corn that makes everybody talk Early Sunrise as the very best introduction to present date. Our seed stock is carefully grown and selected with the sole object of keeping it up to the highest standard of excellence as the earliest, largest and best on record. This is a very distinct variety, which was originated many years ago by a market gardener in northern Iowa. With us it always proved earlier than any other so-called extra early variety of other seedsmen. The ears are about 6 inches long, 10 to 12-rowed; they are very uniform and handsome and have a small white cob. Pkt. 10c; ½ 1b. 25c; 1b. 40c; 2 1b. 75c; 5 1b. \$1.75; 10 1b. \$3.00, postpaid.

Buckbee's Golden Bantam

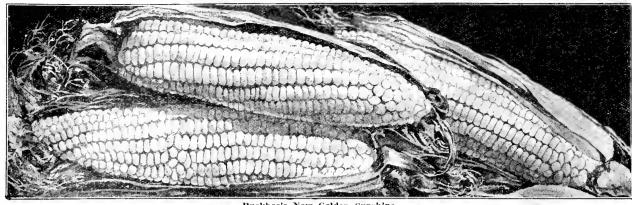

A very early Sweet Corn, about ten days later than Sunrise; more hardy and can therefore be planted earlier than most other sweet corn. It grows 3½ to 4 feet high, produces two or more ears to the stalk; the ears, which are 6 to 7 inches long and covered with eight rows of golden yellow grain, are very tender and of exceptionally rich and delicious flavor. Golden Bantam has a distinct taste and many people prefer it to all other varieties. Market gardeners will find it a well-paying crop wherever it has been tried. Our stock has been carefully grown and selected.

It is in the same class as the Earliest of All Sugar Corns, considerably larger and, best of all, contains a sweetness equal to most true sugar varieties. It adapts itself to any kind of soil, either sand or heavy clay.

It is as large as Stowell's Evergreen. The fodder grows 6 feet high; no small item to a gardener; and, as a proof of its quality and sweetness, we have a continuous call for "Everbearing' from our customers year after year. The ears are of good size and covered with kernels clear to the end of the cob. Each stalk will produce one to two well developed ears. BEAN

Buckbee's New Monarch Wax Bean

The Only "Sure Crop" Wax Bean Ever Grown. Heavy Yielder. Entirely Stringless. Large Pods. Beautiful Color. Sure Cropper. Crisp and Tender.

Our New Monarch Wax Bean is a very sturdy and vigorous grower and as near rust proof and disease resistant as t is possible for a bean to be. One of the earliest wax beans ever grown, starting to bear within 60 days after planting and continues its bearing season longer than most others. Pods are of splendid quality, fleshy, and are stringess at practically all stages of their growth. From 6 to 7 nches long by 1/2 inch through and almost round, they make wonderfully heavy yield, and the beautiful golden yellow color sells them easily. Seed is long, oval, medium size and purplish black color. In common with other black-seeded varieties, this bean may be planted quite early in the season. Practically rust proof, owing to the habit of the plant which branches freely but is perfectly sturdy and upright, every branch carrying a head of magnificent pods. As nearly all of the pods are produced underneath the foliage, excessive heat does not affect it in the least, a very valuable feature whether grown for home, the market garden or for shipping long distances. As a canning bean Buckbee's New Monarch is without an equal, as the pods are long enough to fill the jar and the beautiful color is retained after cooking. NEW BUSH MUSK MELON

The Vineless Gem of the Garden.

The bush habit of growth of this new variety enables it to be grown in small gardens, where the vine sorts could not be grown for lack of room, and they yield about twice as much on the same piece of land as the vine sorts. The fruits are of the popular "Jenny Lind" type, but larger, averaging 5 inches in diameter; they vary somewhat in shape from flattened-round to almost spherical; the ribs are shallow, the surface is dark green, but so densely netted that it appears almost russet colored. The flesh is very dcep, edible almost to the rind and is colored light green flushed with salmon towards the center. The seed cavity is small. The quality is superb, lusciously sweet and juicy, with a cool, gratifying flavor and a delightful aroma. They ripen a little in advance of "Rocky Ford." The plants grow from 15 to 18 inches in length and two or three plants can be grown in a hill 2½ to 3 feet apart. Pkt. 10c; oz. 25c; 2 oz. 45c; ½ lb. 85c.

Beautiful Color—Ideal Size—Uniform Shape—Exceptionally Good Keeper—Wonderful Flavor—Always at Its Best.

Unexcelled for Home Use or the Market.

Buckbee's Genuine Prizetaker Onion has proved itself to be one of the handsomest and most productive large Yellow Globe Onions which are grown extensively today. It grows as easily as any other sort, and can be used for all purposes—the young plants as salad, the half-grown bulbs in early summer, and the perfect mature Onion practically at all times, for it keeps so well that it may be used almost the year round. It is esteemed not only in America, but in foreign countries. Soon after its introduction it was exhibited in London, and in the keenest competition with the products of the most skillful growers, earned an "Award of Merit" from the Royal Horticultural Society of England. Not only does it grow to a large size, but uniformly so. The shape is true globe, broad at the base, tapering sharply at the top. It is so well bred that the tops dry down entirely when it ripens, leaving a clean, sound bulb, perfect in form, rich in color, and wonderfully solid. The outer skin is rather pale yellow, the flesh pure white throughout. It is extremely mild in flavor, very much esteemed for slicing, baking and boiling; in fact, in whatever way it is prepared, it is unsurpassed. PARSNIPS

The value of the Parsnip as a table vegetable is well known but is not generally appreciated at its full value for stock feeding. In favorable soil it yields an immense crop of roots, more nutritious than turnips and very valuable for dairy stock. Parsnips are usually grown on deep, rich, sandy soil, but will make good roots on any soil which is deep, mellow and moderately rich. Fresh manure is apt to make the roots coarse and ill shaped. As the seed is sometimes slow and uneven in growth, it should be sown as early as possible in drills 2½ feet apart; cover ½ inch deep and press the soil firmly over the seed. Give frequent cultivation and thin the plants to 6 inches apart in the row.

BUCKBEE'S NEW SUGAR

BUCKBEE'S NEW SUGAR

Parsnips are one of the few Winter vegetables. The roots are hardy and are improved in flavor by the action of the frost. After repeated trials at Rockford Seed Farms we have no hesitancy in offering Buckbee's New Sugar as the best Parsnip grown. Roots fine size, of good diameter, enabling them to be easily gathered; are exceedingly smooth; the flesh fine grained and of the most excellent quality. PARSLEY

Parsley is used for seasoning soups and stews, for salads and for garnishing; also for ornamental borders in the flower garden. The green leaves are used for flavoring as they may be dried crisp, rubbed to powder and kept in bottles until needed.

Parsley succeeds the best on rich, mellow soil. The seed is even slower than parsnip in germinating and should be sown as early as possible in the spring, in drills 1 to 2 feet apart, covering not more than ½ inch with fine soil firmly pressed down. When the plants are well up thin 8 to 12 inches apart in the row. When the plants of the curled varieties are about 3 inches high cut off all the leaves; the plant will then start a new growth of leaves which will be brighter and better curled; later if these turn dull or brown they can be cut in the same way; every cutting will result in improvement.

Leaves Are Finely Cut, and Heavily Curled. Foliage Is Very Attractive, and Uniformly Emerald Green.

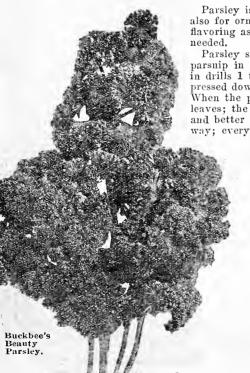

A distinct and handsome variety of quick, robust growth forming compact, ornamental plants, densely furnished with strong-stemmed graceful leaves, finely cut, most beautifully curled, and of that brilliant emerald green color so highly attractive when used for garnishing. The flavor of the leaves is also unusually rich and aromatic, rendering this variety of special value where used for flavoring, in sauces, dressing, etc., either when fresh or dried. Pkt. 10c; oz. 15c; 2 oz. 25c; ½ lb. 40c; ½ lb. 75c; lb. \$1.25.

NEW MOSS CURLED

Invaluable as a garnishing plant and suited for mixing with dwarf, ornamental foliage plants in the garden. This is a vigorous, compact growing variety, excellent for garnishing and flavoring, and a handsome decorative plant. The leaves are very finely cut and so closely crisped or curled as to resemble bunches of moss. Owing to its uniformly fine deep green color and very attractive foliage, this is one of the most popular sorts for both market and home garden. BUCKBEE'S "Full of Life" PEANUTS

Our "Full of Life" Peanuts Are Grown for Seed Purposes Only and Are the Finest That Can Be Grown.

Only and Are the Finest That Can Be Grown.

Peanuts have always been an important farm crop in this country; millions of acres have been planted with them in the southern states, but now that their great value for producing oil and oil-cake is being better realized, a much larger acreage will be grown with them. Last year about a hundred million bushels of Peanuts have been ground up by oil mills for oil and oil-cake, while a few years ago none had been used. A ton of Peanuts in pods produces 80 gallons of sweet oil and also 750 pounds of feeding cake. This oil and cake are superior to that from cotton seed. Peanut oil is fully equal to olive oil and Peanut meal makes hard hog-fiesh. The Peanut Family contain a larger percentage of oil than the other legumes and are wanted by the oil mills who now pay a higher price for a bushel of them than for cotton seed. In the South, especially on a sandy land. Peanuts will supplant cotton as a money crop, being more profitable. The cultivation of this crop is also every year extending farther north, and on suitable soil in the northern states Peanuts will make a profitable crop for stock feed where Indian Corn thrives and with a season of only four months free from frost. Plant in rows 2½ to 3 feet apart and 6 to 8 inches apart in the rows. The Seed Peanuts are planted either shelled or in pods, using 1½ peck of shelled or 2 bushels in pods per acre. The pods may also be broken in 2 parts, soaked in water and then planted at once. The larger varieties are mostly planted shelled at the rate of ½ bushel per acre Planting must not be done until the weather is warm. Cultivate until they begin to form pods. When they mature pull them up, turning the roots to the sun. In bright weather they will be cured in 24 hours. They must be pulled before frost.

MEM MAMMOTH VIRGINIA Peanuts have always been an important farm crop in this

bright weather they will be cured in 24 hours. They must be pulled before frost.

NEW MAMMOTH VIRGINIA

This Mammoth Virginia Peanut is more profitable and desirable than the common spreading kind, because more productive, earlier, yields fever imperfect pods and is more easily cultivated and harvested, having very erect stems and upright foliage. The vines make valuable forage for stock. Will ripen even as far north as Canada. Hundreds of our young friends reported a wonderful crop the past season. The standard variety for roasting. Postpaid, pkt. 8c; ½ lb. 15c; ½ lb. 25c; ib. 40c; 5 lbs. \$1.85. By express, not prepaid, 5 lbs. \$1.59; 10 lbs. \$2.50.

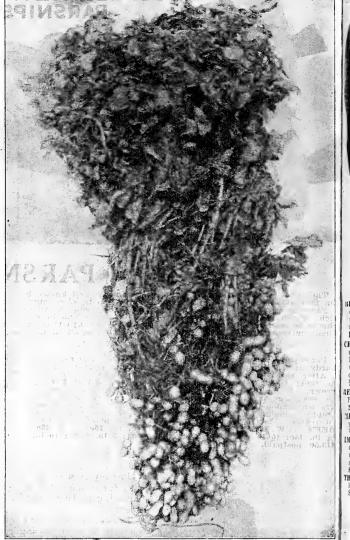

NEW EARLY LONG POD BUSH

Originated by one of the best Peanut growers in the South and is certainly a distinct improvement in appearance over any Southern variety now in use. Will do well on most all kinds of soil, and fill out better than any other large variety. Can be pulled up with the vine same as the old Spanish Peanuts. The distinct long pods grow close and are well filled, containing 3 to 4 nuts to each pod. Very productive and of a mild, sweet flavor. Well adapted for stock feeding. Postpaid, pkt. 10c; ¼ lb. 15c; ½ lb. 25c; lb. 45c; 5 lbs. \$2.10. By express, not prepaid, 5 lbs. \$1.75; lb lbs. \$3.00.

SPANISH PEANUT

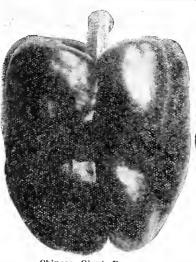

SPANISH PEANUT

The earliest variety grown; maturing in about 100 days; in some parts of the South two crops are raised in a year. Plants upright, with abundant and heavy foliage; the pods cluster at their base. Pods are small but well filled with nuts of sweeter and finer flavor than the larger sorts. The yield is on an average from 50 to 60 bushels of nuts and a ton of hay per acre, but frequently 100 bushels of nuts have been harvested. Can be cultivated with the plow. Because of its earliness, easy cultivation and great productiveness it is the best variety for farm use, for fattening hogs and other stock. In harvesting, the nuts hang to the vine and tops and nuts are fed together as a complete hay and grain ration. This variety has also a commercial value over that for feeding; it is the kind mostly used for Peanut candy and salted Peanuts and is also the best for oil, containing 10 per cent more oil than others. It grows only 16 to 18 inches high, requires no support, and has the same large pods as Gradus, even a few days earlier in season and of little darker green color. The Peas are almost double the size of any other early dwarf Pea, are wrinkled, of bluish-green color, and have the true rich marrow flavor, tenderness and quality of the best main crop varieties. The rival to the famous Gradus—as a long-podded, extremely early wrinkled Pea. The growth is identical but the pods are deeper, richer green, square at the end and contain more Peas. The crop ripens only 3 to 4 days after Gradus. A splendid market gardener sort, but especially recommended for the home garden. of pale green color and bear in great profusion from top to bottom immense round, dark
green pods, 4½ to 5 inches long, well filled with from 8 to 10 or more Peas of delicious
quality as large and as rich in flavor as the Telephone Peas, and these Peas can be had

This grand, exceptionally good new Pea is beyond all reasonable doubt by long odds the very best Second Early variety that has ever been introduced. This is a true Hubbard Squash, except in color, which is bright golden. It ripens its crop very early and uniformly, thus making it a certain cropper. The fruits are very uniform in size, weighing from 6 to 8 pounds, and in shape are like the Hubbard. Through maturing early, they are wonderfully long keepers, so they can be held over in good condition for canning use. The shell is warty, hard and strong, and a very beautiful orange red color, except for a bit of olive green on the blossom end. It cooks very dry, fine grained and good flavored. BUCKBEE'S EARLIEST MARKET

The Earliest Large Smooth, Scarlet Tomato in Existence.

Indispensable to the Market Gardener.

A Great Money-Making Tomato.

This variety bears fruit which in size, shape, color, solidity and quality compares favorably with the noted later kinds, and by repeated trials at Rockford Seed Farms and elsewhere has demonstrated that it ripens up a larger portion of its crop the earliest of any variety. It is, without question, the earliest good, large scarlet Tomato. Gardeners and Tomato fanciers will readily see the advantage obtained over their competitors by growing Buckbee's Earliest Market. This is the variety which will give them the opportunity to be first on the market with a large crop of beautiful large fruits, selling readily at good prices.

Compared with the well-known Earliana, Earliest Market is about a week earlier, the fruits are fully as large, smoother, have no hard core, while Earliana is often rough and has large seed cavities. Furthermore, Earliest Market is much more prolific. An excellent kind also for the home garden, and if you have not given this wonderful variety a trial, be sure to include it in your order for 1931. BUCKBEE'S NEW 50-DAY TOMATO

. The Largest Fruited, the Smoothest, the Finest in Quality of all Extra Early Scarlet Tomatoes.

Originated on our Rockford Seed Farms. Called 50-Day Tomato because it produces large, ripe fruits on strong plants in 50 days from time they are set in the open ground.

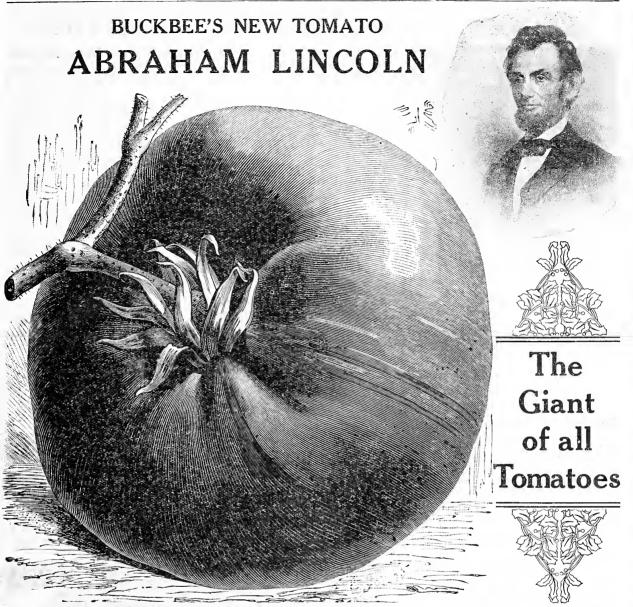

The vines are short, very vigorous, enormously productive and ripen a very much larger crop at the early part of the fruiting season than any other extra early variety. The fruits are globular, always entirely free from cripples, wrinkled or cracked fruits, and weigh on an average about 5 oz. each. although many fruits as heavy as 6½ oz. each and over have been found in our fields. The color of the fruits is a beautiful bright scarlet. They ripen evenly, well up to the stem, have no hard core, small seed cells, and are practically all heavy, solid meat of mild and most delicious sweet flavor. The skin is thin, but very tough, making it a splendid long-shipping variety.

Compared with Earliana, 50-Day is a much heavier cropper and its fruits of much larger size, smoother, of better quality, containing less seed and more meat. They are of better appearance and therefore better sellers; further more, they ripen practically as early. Fifty-Day will soon replace Earliana, and it should also be planted in place of second early sorts like Bonny Best and Chalk's Jewel, being earlier, more

BUCKBEE'S ABRAHAM LINCOLN The World-Beating Tomato

BUCKBEE'S NEW TOMATO—ABRAHAM LINCOLN—This world-beating Tomato was originated on Buckbee's Rockford Seed Farms and named in honor of Illinois' greatest son—Abraham Lincoln. This Giant of All Tomatoes was introduced by us in 1923 and is the largest Tomato ever grown. We have had 9 tomatoes in a single cluster with a total weight of 7 pounds; the average weight is about a pound and we have grown many weighing nearly 3 pounds. Beautiful dark red, attractive fruits, heavy, large, sweet, solid and meaty with very few seeds. For so large a tomato it is remarkably smooth and free from cracks and seams.

BUCKBEE'S NEW TOMATO—ABRAHAM LINCOLN—usually bears fruit in clusters of from four to six; the individual fruit, 5 to 7 inches in diameter, runs remarkably uniform in size and shape, being almost round, solid and weighs about one pound each, or heavier than any other tomato grown; the surface is very smooth and seldom cracks; the color, a rich blood-crimson, also permeates the flesh to the very heart; it ripens thoroughly, coloring up clear to the stem.

BUCKBEE'S NEW TOMATO—ABRAHAM LINCOLN—possesses one crowning merit, the phenomenal solidity of the flesh. Even the seeds, which are small and few, are embedded in flesh of meaty firmness.

BUCKBEE'S NEW TOMATO—ABRAHAM LINCOLN—has superlative merit; it is a sturdy, healthy grower with distinctive bronzy-green foliage; it ripens its first fruits immediately following those of the early sorts and from that time until frost it is practically ever-bearing, yielding enormous quantities of tomatoes, no other variety approaching it in productiveness.

BUCKBEE'S NEW TOMATO—ABRAHAM LINCOLN—on account of its solid character, splendid quality, rich red color of the flesh, and its appetizing appearance, is absolutely unsurpassed for slicing, salads and table use generally, while it is equally superior for baking, boiling and canning—the solidity of flesh and minimum of juice make thickening unnecessary.

BUCKBEE'S NEW TOMATO—ABRAHAM LINCOLN—as a market variety, has already become very popular; its general merit and handsome appearance can not but attract buyers, and it is so solid that it "holds up" well when shipped, even though it does not have the thick, tough skin heretofore considered the most important requisite in a shipping tomato.

Seed of Buckbee's New Tomato Abraham Lincoln can only be obtained from the originator, H. W. Buckbee, Rockford Seed Farms. Buckbee's "Full of Life" Seeds are bred for disease resistant qualities. Pkt. of 200 seeds 20c; 3 pkts, 50c; ¼ oz. \$1.25; ½ oz. \$2.00; 1 oz. \$3.50. Postpaid.

Buckbee's New Tree Tomato Firm, Solid, Thick Flesh, Large Meaty Center.

This grand Tomato owes its popularity to its stiff, vigorous, upright growth, with fruit well above the soil, and to the earliness with its stiff, vigorous, upright growth, with fruit which it reaches its maturity. In color the fruit is purplish pink, form always round and symmetrical and of medium size. Buckbee's New Tree Tomato is immensely productive, clusters of four to six fruits being produced in abundance along the stem. All of the fruits grow to a marketable size. The table qualities are the best as this is a good slicing variety, the seed cells being surrounded by rich, heavy flesh, This feature also makes it desirable for canning. As a shipper it stands up remarkably well, arriving at its destination in fully as good condition as when it left the field. This wonderful Tomato leaves nothing more to be desired, as it is mild, pleasant and of delicious flavor. Being a strong, robust grower, it has a broad foliage which prevents sunburn in hot sections. A splendid novelty. Equals its famous parent, the Red Ponderosa, in every respect but color. It possesses its large size, heavy meat and luscious quality, and in addition is of a striking rich golden yellow color, making a novel and most attractive table effect, especially when served sliced with a red variety. This is the largest of the yellow varieties in cultivation. The fruits are very uniform in shape and size, contain but little core and few seeds, and are a solid mass of succulent meat. Their skin is thin and they ripen the first fruit quite early, continuing to bear until frost. Pkt. 15c; ½ oz. 30c; oz. 55c; 2 oz. \$1.00; 1/4 lb. \$1.85.

Buckbee's New American Beauty Asters
The Aristocrats of the Aster Family

The Aristocrats of the Aster Family
When we first offered the American Beauty in 1918 we had an immense flower of a most pleasing color. This has been perfected so that now we have a flower 4 to 5 inches in diameter. In 1920 we listed for the first time New Purple American Beauty and later the New Lavender and September Pink—three varieties that are now in even greater demand than the original Carmine American Beauty. All four colors come true from seed and are of the same manunoth size as the original. We grow these wonderful Asters on our own farm and select the seed from the finest flowers only.

BUCKBEE'S RAINBOW FLOWERS or HARDY IRIS

The Most Wonderful Colorings of Any Plant Grown Except the Orchid

These Iris are all sun lovers and delight in a sunny situation. They are all deliciously fragrant, large and handsome, more or less beautifully mottled and veined. Their beauty at first sight rivals that of the Orchid, but, on closer examination, have no hesitation in saying they yield points of interest not to be found in the whole of the Orchid family. Those who have not used these Iris for surrounding lakes and ponds, or cultivated them in the flower borders, shrubberies, woodland walks, and wild gardens should do so. If planted around ponds or lakes they should be placed well above the water level. water level.

The flowers are pure white, three-fourths of an inch in diameter, star-shaped, and are borne in great panicles or clusters of bloom, fairly covering the plant. These clusters are carried on long, slender stems, and stand out boldy from between the glossy-green leaves. The fragrance of the flowers is delicious, resembling the English Hawthorne blossoms. The newest and one of the best of all the Clematis. We have always had large flowered varieties, but not in Whites. The vlne is a strong grower, and is covered throughout the season with fine large, creamy white flowers. The very best of the white varieties; a perpetual bloomer. Fine 2-year-old field grown roots, 95c each, postnaid.

REGARDING CLEMATIS

The Clematis we offer this season are exceptionally fine, strong 2-year-old plants. Many failures in the growing of Clematis are the result of too shallow planting. The crown of the roots should be set at least 3 inches below the surface of the soil. On account of the brittleness of the bark on Clematis, it cracks very easily, which, however, does not harm it in the least.

Start Right! Get the Best. ORDER EARLY.

NOTICE—All varieties marked (S) are Staminate Perfect Flowering and Bi-Sexual varieties. All varieties marked (P) are Pistillate and destitute of Stamens. Therefore when planting varieties marked (P) it will be necessary to have every third row a Perfect Flowering or (S) variety to properly fertilize the bed; much finer fruit will be obtained by so doing.

For example—If your order calls for 200 Great Ruby (P) you should also have 100 Great Northern (S) to properly fertilize the bed. Plant the first two rows with Great Ruby (P) and the third row with Great Northern (S) and so on; or you can use any other (P) and (S) varieties in the same manner.

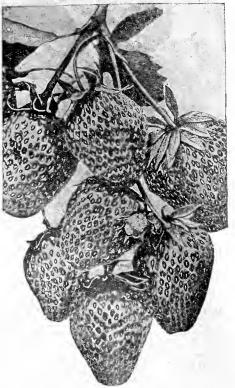

MONEY IN STRAWBERRIES

A Strawberry Bed is a safe and sure investment. Greatest of all Money Makers, \$600.00 profit per acre. Only one expense—the cost of plants, which is merely nominal—lasts for years.

EVERBEARING OR FALL-BEARING STRAWBERRY

A dish of luscious strawberries in the fall is a luxury which everyone who owns a garden could enjoy. Plant at least twenty-five plants, but if you can spare the room plant 100 or more. Keep all blooms picked off in the spring and do not allow the plants to bear regular crops in June, thus conserving their strength for the fall crop.

WE WARRANT all shipments of Strawberry Plants to reach purchaser's hands in good growing condition and when so accepted no orders will be duplicated or replaced for any cause.

BUCKBEE'S SPECIAL HOG PASTURE MIXTURE

Especially prepared for quick results and a full crop. This mixture is composed of the following annual varieties: Field Peas, Soja Beans, Vetches, Cowpeas, Crimson Clover, Rape, Sugar Cane, Japanese Millet, Turnips, Rutabagas, Speltz, Rye and other grains and forage plants, all in the right proportion. This mixture will provide an abundant pasture, within six weeks from day of sowing the seed, continuing green and bountiful until destroyed by frost; almost all of these varieties will come up again as fast as they are eaten down and will furnish 4 to 5 times as much forage as can be obtained from any clover-grass mixture, and this food is succulent and nutritious and much relished by hogs; it will keep them healthy and strong and they will gain in weight easily and quickly. This mixture will prove a most profitable investment for every farmer, not only for feeding hogs but also all other farm stock. It is usually sown about corn planting time, but can also be sown as a catch crop any time during the season until August. Use 100 pounds for 2 acress. Price, 10 lbs. 86c; 25 lbs. \$1.80; 50 lbs. \$3.15; 100 lbs. \$5.65, by express or freight not prepaid.
